

NIFCO BUCKLE 2022Q2 NEWSLETTER

VOLUME 2 / ISSUE 2

A Recent Success

■ SPLC (MASK STRAP) Contribution

The SPLC team adheres to the original intention and concept of taking from the society for the society by giving away free SPLC sample to the front line-epidemic prevention personnel. Total 14 medical institutions participate this activity and 420 sets of SPLC (MASK STRAP) are contributed.

CUSTOMER EXPERIENCE FOCUS

You could contact service@nifco.com.tw for any comments, questions, or requirements with Nifco on-line services. We would love to hear from you to improve timely and continuously.

Q: I am in dire need of how and where I can buy some buckles?

A1: You may use our "Sample Request" feature from Nifco website to receive actual samples. We will contact you for your specific needs and customized services.

Q: Is there a coordinated shoelace for SRLL series cord lock that can be purchased altogether?

A: Yes, there are 2 colors, black and white for your option.

People & Planet"***

NIFCO SUPPLY CHAIN LOGISTICS FOR SUSTAINABLE MANUFACTURING

Increase profitability & reduce business risk by collaborative B2B plastics reuse & recycling

In-house reuse makes perfect sense for almost every manufacturer of plastic products, but using recycled materials brings challenges. Most of these come from the fact that you are buying a commodity that is supposed to be the same as the 'new' material, but you can't always be entirely sure of its quality.

A SHORT HISTORY OF FOOTWEAR & FASTENERS

After millennia of shoe laces and buckles, welcome to the age of plastic fasteners

When we see how long people have been wearing shoes and other footwear, it may be surprising how long it has taken for plastic fastener manufacturing technology to improve on the humble shoelaces, straps, buckles and buttons used through the ages.

Fortunately today we can choose from better materials and designs than our ancestors ever could. This has enabled the development of newer, better materials for manufacturing shoes as well as setting off a revolution in fastener design.
